### AIM & SCOPE

The Study Day **SMGE"2023**, **Study day: Soil Mechanics and Geotechnical Engineering**, **Soil Mechanics** studies more particularly the behavior of soils in terms of their resistance and deformability. A **geotechnical** or geological study is a soil study which aims to: determine the mechanical characteristics of the land to support a construction, assess the natural risks identified in the sector in which a project is located and their impacts on the future construction. **Geotechnical engineers** analyze soil characteristics and terrain behavior to identify and prevent major geotechnical risks of projects.

### IMPORTANT DATES

- |                              |                   |
