

NATIONAL SEMINAR ON RENEWABLE MATERIALS AND ENERGY

May 2, 2026 | NSRME Virtual Seminar

University Ahmed Zabana of Relizane–The Faculty of Science and Technology–Department of Civil Engineering and Public Works, in collaboration with the Laboratory of Innovative Materials and Renewable Energy (LMIER), is organizing the National Seminar on Renewable Materials and Energy (NSRME-2026), to be held on May 2, 2026.”

Abstract Submission

Abstract proposals should be sent by email to the following address:

zohra.abdelhak@univ-relizane.dz

All papers must be

Written in English or in French. Authored by a maximum of 4. Submitted in word format. Formatted according to the seminar template.

The submitted Word file must be named as follows: **Theme number followed by the author's full name.**

All presentations must be

Shared either in English or in French. In PowerPoint or google slide or canvas format (pdf and Word are not allowed) Shared from a computer (not a phone).

IMPORTANT DATES

Submission Start: **March 01, 2026**

Submission Deadline: **April 15, 2026**

Notification of Acceptance: **April 25, 2026**

Seminar Program: **April 29, 2026**

Seminar Date: **May 02, 2026**

1 Innovative and Composite Materials

Researchers are invited to present work that advances knowledge and fosters innovation in materials engineering, including the development and application of new materials, advanced structural composites, sustainability and environmental impact, experimental and numerical analyses, and practical solutions to modern construction challenges.....

2 Soil Dynamics and Structures

Topics of interest cover, but are not limited to: soil-structure interaction, vibration analysis, seismic performance, foundation design under dynamic loading, and innovative computational or experimental methods. Authors are invited to submit work that advances knowledge, proposes practical solutions, or explores new methodologies in the field....

3 Renewable Energies

Research themes aimed at developing sustainable and efficient energy solutions: solar energy technologies, materials innovation, system integration, and economic and environmental assessment; wind energy optimization....

The objective of this conference is to provide a scientific forum dedicated to renewable materials and energy, bringing together researchers, academics, and industry professionals to exchange knowledge and share recent advances. The conference aims to promote sustainable solutions, encourage innovation in eco-friendly materials and clean energy technologies, and strengthen collaboration between research and practical applications to support the transition toward a more sustainable and energy-efficient
